THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT 50 U.S.C. 31 AND 32, AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

- 25X1 1. Work was begun on the construction of a large woodworking combine on a plain along the Tara River, in Mojkovac, in the middle of 1948. The construction is being done by a private construction enterprise from Niksic which promised to have the plant in operation by April 1950. So far an electric-powered lathe shop, a drying room, scrubbing tanks, mechanical workshops, a flooring mill, and several residence buildings have been completed.
2. Processed materials will go from the lathe shop to the automatic sorting room, and then into a warehouse. From there they will be sent out to fill the needs of a trunk and box factory, a flooring factory, a barrel factory, a chair factory, and a large factory making standardized agricultural vehicles. Small waste will be used to make lesanit (sic) boards, which will be used for making furniture and for construction purposes. A factory for the manufacture of household furnishings will also be constructed. The combine will also make excelsior and Heraklit (sic) boards to be used in construction. All work will be mechanized and driven by electric power obtained from the hydroelectric plant in Musovica Rijeka.
3. The plant will receive its raw materials, that is, ash, maple, and elm wood, from the neighboring area, mainly from the valleys of the Lim and the Tara, which are unusually rich in wood. It is estimated that there are several million cubic meters of wood which could be obtained in this region. Wood will be supplied to the combine from the Tara valley by means of rafts floated down the Tara River, and will be brought from the Lim River by truck and on small freight cars pulled by small electric locomotives.
4. The present capacity of this combine is not known, but, judging from the buildings which are going up and the size of the area it occupies, it seems that the output of the combine will be quite large.
- 25X1 5. It is planned to export most of the products of this combine.
